

Biobase Sweden AB unveils their revolutionary line of biobased and biodegradable base oils.

We are excited to unveil our revolutionary line of biobased and biodegradable [base oils](#).

With solubility like naphthenics, and VI like Group III paraffinics, we believe these products can serve as the main component of finished lubricants, metal working fluids, process oils and greases.

Another possibility is as carrier material in additive packages for sustainable lubricants.

In today's market the products can compete with PAO and outcompete biodegradable esters.

Small scale samples are available now!

With the right partner we could scale up to 10 000 tons within months, and 100 000 tons within a couple of years.

See you at [The Lubricant Expo](#) in September!
