

# BIO-ABSO

## OIL ABSORBENT

BIO-ABSO represents a bio-based solution engineered for the absorption of non-polar substances, specifically designed for spilled oils, fats, grease, and fuels. Manufactured in Sweden, BIO-ABSO is exclusively composed of 100% paper pulp, derived from sustainable sources within the Swedish forestry. BIO-ABSO is an environmentally certified product.

Distinguished by its exceptional absorption capabilities, this material excels in swiftly and efficiently absorbing substances in both dry and wet environments. The product's low density contributes to its ease of transportation, handling, and collection.

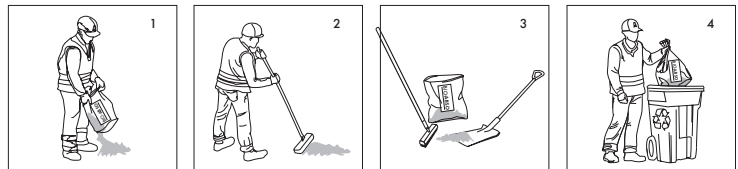

### Product information

- 1 kg material absorbs up to 14 kg oil
- Quick and efficient absorption
- A Swedish product made of 100% pulp
- Environmentally friendly
- Easy to use
- Low material weight – 60-100 kg/m<sup>3</sup>
- Hydrophobic – floats on water, not sensitive to rain

### User Instructions

1. Pour the absorbent from approximately 40 cm above the contaminated area. In bad weather, it is recommended to block the wind and reduce the distance between the bag's opening and the contaminated area when pouring the material out.
2. Spread out the material, for example with a brush, and let it absorb.
3. Sweep up the contaminated material. The original packaging can be used for collection if everything has been consumed.
4. Dispose of the contaminated material as either combustible or hazardous waste, depending on the substance absorbed. Empty packaging is sorted as plastic.
